CLAIMS

[Claim(s)]

[Claim 1] While memorizing the image data outputted from the host computer in video memory In the display control which displays the image data on a liquid crystal display by the raster scan method To the image data and synchronizing signal of a part which said host computer rewrote by the no interlace among the image data memorized in said video memory The display control characterized by having the partial rewriting display and control section supplied to said liquid crystal display to the timing which added the data in which the display position of the rewritten part is shown, and synchronized with the display to a cold cathode tube display.

[Claim 2] The display control according to claim 1 which the data, image data, and synchronizing signal which show said display position can supply to said liquid crystal display during the drawing period of the effective viewing area of a cold cathode tube indicating equipment, and a perpendicular blank period.
